KUNGUMANITHISH K

Aspiring Oracle Transportation Management (OTM) Techno-Functional Consultant

+91-6374991169 | kungumanithish@gmail.com | linkedin.com/in/kungumanithish | github.com/kungumanithish

PROFESSIONAL SUMMARY

Information Technology undergraduate with hands-on experience integrating and validating REST APIs, writing SQL for data accuracy, and building role-based access controls across healthcare, campus, and government platforms — including a Directorate of Technical Education (TN Govt.) project delivered under strict compliance and risk-control requirements. This experience translates directly into requirement gathering, configuration, data validation, and UAT-style testing for enterprise applications. Currently building depth in Java, Spring Boot, Oracle Database, Kubernetes, and Microsoft ADO, with strong eagerness to learn Oracle Transportation Management (OTM), supply chain business processes, and enterprise consulting, and to apply Generative AI tools to boost documentation and delivery productivity.

SKILLS RELEVANT TO OTM CONSULTING

Databases & Data Validation: SQL, MySQL, NoSQL, MongoDB — query writing and data validation

Enterprise / Compliance Platform Experience: Built and validated a state government platform under strict compliance and risk/data-accuracy requirements; implemented role-based access control to reduce production risk

Currently Building: Java, Spring Boot, Oracle Database, Kubernetes, Microsoft ADO — directly aligned with Oracle enterprise application environments

APIs & Integration: REST API integration and development; backend logic for data-processing pipelines

Frontend: React.js, JavaScript, HTML, CSS

AI & Digital Skills: Practical use of Generative AI tools (e.g. ChatGPT, Copilot, Claude) for research, documentation, and productivity; interested in prompt engineering and AI-assisted coding, debugging, and testing

Tools & Version Control: Git, GitHub, VS Code, Figma, Canva

Languages: Tamil, English

EXPERIENCE

Software Developer Intern | *Search First Technologies Pvt. Ltd. | 2025 – 2026*

Hospital Management System (HMS) — Designer & Frontend Developer

- Designed end-to-end UI/UX for patient registration, appointment scheduling, billing, and doctor dashboards using Figma & React.js; built reusable, role-based responsive interfaces comparable to enterprise module design.

Campus Management System (CMS) — Frontend Developer & Backend Logic

- Built the full React frontend for student records, attendance, schedules, and fee management; integrated and validated REST APIs, ensuring real-time data consistency — direct exposure to system integration and data validation.

DoTE — TN Government Project — Frontend & Backend Logic

- Built frontend modules and backend logic for a Directorate of Technical Education (TN Govt.) platform under strict compliance requirements; implemented and validated role-based access controls to reduce risk in production, mirroring the configuration and testing discipline required in OTM implementations.

Web Development Intern | *ShenAi Private Software Solutions | 2024*

School ERP Dashboard — UI/UX Designer & Frontend Developer

- Designed wireframes and a reusable component library for 10+ role-based dashboards (admin, faculty, student, parent); shipped production-ready screens for an ERP-style system.
- Built a responsive e-commerce site for an opticals showroom, including product catalogue UI and database integration.

PROJECTS

Hospital Management System — Search First Technologies

- Architected a modular React component system serving three user roles (patient, doctor, admin) under a single design language, preventing UI divergence and enabling consistent reuse of existing components.
- Solved real-time appointment sync via API polling with optimistic UI updates, without requiring backend changes — reflecting practical experience with system integration constraints.

Campus Management System — Search First Technologies

- Owned frontend and backend: built React UI and wrote attendance calculation + fee-processing logic, requiring end-to-end data-lifecycle validation, similar to business-process configuration and testing.

EDUCATION

B.Tech in Information Technology — Nandha Engineering College, Erode, TN | *Exp. Sep 2027*
CGPA: 7.1 | Batch: 2027 | Relevant Coursework: Computer Networks, Web Development, Cloud Computing

CERTIFICATIONS

- Fundamentals of Python — Infosys Springboard
- Basics of MongoDB — MongoDB (Official)
